Project Discovery Phase

> **We're going to build some awesome technology together.**
> **Here's how we're going to do it.**

How it works	The discovery phase is the first steps in a project where we deep dive into the functionality, analyze the requirements, and lay out the project plans that we'll follow to completion. This helps us both fully define how development will be run, who will deliver what, and when. We'll setup a series of meetings with your team to dig through and understand all of the plans you've written out and ideas you've developed. We'll help turn these into formal requirements, size up the skillsets and implementation team needed. Then we layout a project timeline and milestones for development. In the end, the project discovery phase produces a blueprint that defines how the project will be implemented.
Deliverables	● Existing Asset Assessment ● User Stories ● Required Skillsets ● Team Requirements ● Implementation Timeline ● Project Milestones ● Project Quote
Timeline	● Week One 　○ Kickoff meeting — Jackrabbit & Client 　○ Goal discussions — Jackrabbit & Client 　○ Existing asset review — Jackrabbit 　○ User story generation — Jackrabbit 　○ Week one review — Jackrabbit & Client ● Week Two 　○ Implementation plan discussions — Jackrabbit & Client 　○ Analyze skillset requirements — Jackrabbit 　○ Size implementation team — Jackrabbit 　○ Define timeline & milestones — Jackrabbit 　○ Share & review deliverables — Jackrabbit & Client
Investment	**$1,000 - $10,000** This discovery investment is applied towards the final project, and becomes a down payment when we begin full development.
